Adding tasks

Simple addition of a task directly to an area

Click on the area label (here “Main facilities”) :

The following window pops up:

Select the activity you want to associate:

Your task is now associated with the area.

Creation of summary tasks

To create a summary task, click on the Project in the left panel explorer of the Gantt chart, then click on the "Add a task" button:

Gantt chart		Tasks	Connected objects on selected drawing	
Name (ID)	Area Filter	Start	End	03/06/2024

Construction Facilities	PM-00002	03/16/20201208:00	12/11/20201215:00	

In this example we'll create the following summary task:

- name: "Phase 1 : 1/2 ROUNDABOUT North"
- ID: '1'

Description

After clicking on OK, you can see in the Gantt chart that the task has been created, but as a simple task. To turn it into a summary task, simply drag and drop a child task into it. Here we'll do it with the "Construction facilities" task:

Area Filter	Start	End	03/06/2024	11 : 09	Advanced Filter	Tasks	Default color	Live View	Remove live view filter
	Between	Strict	03/06/2024	11 : 09

Batch import of tasks

With Phase Manager, it is possible to create your tasks directly or to import them from an XLS file through the clip-board.

How to import tasks

Open the file to be imported (in this case Demo Project V5.xlsx), then select and copy into the clipboard all tasks data **header included**:

Explanations:

- 1/ The summary tasks are imported first (IDs 2 → 6)
- 2/ Each task is referred to a summary task, via the "Parent" column.
- 3/ Each task must have a parent: in the absence of a summary task, the subproject (here PM-00001) is then mentioned, which is therefore here the parent of the summary tasks.

Go to the menu **Options > Import tasks/links**.

In the import window that opens, insert the data from the clipboard by clicking on the **Paste** button:

The preview area shows you that the data has been read from the clipboard. You can then assign each column to a Phase Manager field, either manually or by importing an existing exchange profile.

Here we'll load the profile Import ProfileEN.pmx (delivered with your installation).

Click on the **Load profile** button:

Load profile **Profile name:**

Date format dd/mm/yyyy ☐ Ignore hours

Then browse your hard drive for the exchange profile and click on **Open**.

Then check that the display is as follow:

Note on the warning window:

A window tells you that some fields have not been imported: this is informative, and concerns the empty

fields "Area" and "Dates" for the summary tasks; Area having no meaning, and Dates are inherited from its child tasks:

Multizone, impact, right-of-way (RoW) and execution mode

Phase Manager enables extensive management of the RoW and impact of tasks. The example below illustrates those new functionalities by creating a daily sequential book.

The task 'RT V1 20+200 - 20+700' below is associated with two areas or axis, namely V1 and V2 :

Task details Dates Areas Other options Links								
Area	Execution	Full axis	Start dist...	End distance	Right-of...	Lengh Bef...	Lengh A...	Impact
V1	Mobile ▾	<input type="checkbox"/>	20.2	20.7	<input checked="" type="checkbox"/>	0.1	0.1	<input type="checkbox"/>
V2	Fixe ▾	<input type="checkbox"/>	20.2	20.7	<input type="checkbox"/>	0.0	0.0	<input checked="" type="checkbox"/>
Ajouter... ▾	▾	<input type="checkbox"/>	0.0	0.0	<input type="checkbox"/>	0.0	0.0	<input type="checkbox"/>

Here are the details of the settings:

V2 axis :

- 'Impact : checked' → the axis is impacted by the task throughout its duration, even if it does not take place there → this impact will be materialized on our deliverable.
- 'Full axis vs KPs : Start and End distance are set' → the impact will only concern a part of the axis (between the distance points set).
- 'Execution : Fixe' → the impact is permanent on the entire segment of the axis throughout the duration of the task.

V1 axis :

- 'Execution : Mobile' → the segment occupied on the axis by the task will move (as it lasts 3 days, we will be able to see this progression on the 3 successive pages of the sequential book).
- 'Lenght Before / After : 0.1' → the task will have a 100 m right-of-way before and after the work (this right-of-way will also be displayed on the deliverables).
- 'Full axis vs KPs : Start and End distance are set' → the task takes place on the specified axis portion..

On the first two daily pages of the considered 3-day sequence, we can visualize:

- in yellow: the impact on axis V2
- in red: the task that is progressing on axis V1
- in grey: the Right-of-way of the task on axis V1
