# Task styles not taken into account

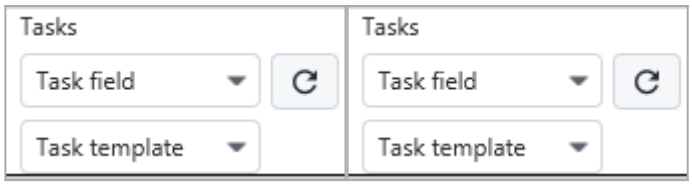

*“My task styles are not taken into account into the Gantt or my deliverables.”*

## 1/ Check the settings

- Make sure that the custom field (type: choice list) that contains your styles is being used.
- Do not hesitate to reload it:

**For the Gantt chart in the Create phasing interface:**

**In the deliverables :**

## 2/ Imported styles : check letter case

Phase Manager is case sensitive for field values.

If you have imported an “task style” field with a value “**E**arthwork”, but in the custom field used for styles the value is “**e**arthwork”, Phase Manager will not take it into account.

## 3/ Are several tasks working at the same time?

If several tasks are working at the same time in the same place, Phase Manager will use as a style a patchwork of colors of all the tasks working there, with a 45° hatched pattern.

## 4/ Do some areas have custom settings?

Right-click to check that the area that does not apply the style does not have a custom setting. For example below we can see that this area applies the status color :

**Projet Linéaire**
**12 impasse Bernard Lyot**
**85 000 LA ROCHE-SUR-YON**
**Tél. : +33(0) 2 22 44 52 52**
**support@projetlineaire.com**
